

SYNOPSIS

Radioactive Wolves

Radioaktive Wölfe

In 25 years the nuclear wasteland around Chernobyl has re-emerged as a complete ecosystem and one of Europe's largest wildlife sanctuaries. And yet, it is radioactive. Where humans are unable to live, nature is flourishing. Somewhere in this nuclear wilderness, there are packs of radioactive wolves, wandering through abandoned towns. Here they live in large packs as they used to. There are now an estimated 300+ wolves making the most of this deceptively beautiful landscape. But are these wolves mutants? Have they been affected by nuclear contamination after the '86 explosion? This film embarks on a journey to investigate the fate of the wolves and other animals in the contaminated wilderness.
