

SYNOPSIS

Explorer Express

Der Forscherexpress

Why does the koala bear have a speckled posterior? Can plants sweat or air be liquid? And how can you transfer news from one continent to another without any electricity? These and many more questions are answered in this extraordinary and successful series for young researchers from 8 to 12 years. Traveling through time, space, air and water, Thomas Brezina and Kati Bellowitsch take you on the special Explorer Express en route to «discover, experience, investigate and do it yourself». During these exciting trips the two presenters reveal facts worth knowing about nature, animals, technology, physics, chemistry and history. They also conduct experiments for viewers to do themselves at home. Each episode of the series features interesting stories, stunning experiments and vivid explanations.
