

# SYNOPSIS

## 3D Safari: Africa

Africa, kingdom to some of the world's most rare and endangered species. Here we join our 3-D camera team as they begin a unique journey. For the first time ever, using the newest technology, Africa's most unusual, largest and dangerous wildlife will be filmed in 3 dimensions - close enough to touch. On this journey our 3-D camera team makes their way through some of Africa's most beautiful landscapes including Kenya, South Africa, Uganda and Rwanda filming the animals in their natural environment. From the Black and White Rhinos, to close encounters with some of Africa's most dangerous cats our 3-D team has to exercise extreme caution and knowledge of animal behaviour as they attempt to move in amongst these animals filming how they live, hunt and play. »Making of« elements will show viewers just how close our 3-D team has to get to the animals in order to film in 3-D and visits to people who have dedicated their lives to saving Africa's endangered species give the viewer an insider's knowledge into Africa's animal kingdom. The final challenge and greatest danger comes indeed not from wild animals but from mankind as our team enters a battlezone intent on finding Africa's exclusive and highly endangered mountain gorillas. This documentary/adventure brings Africa's wildlife into a new dimension - for a very special viewing experience, the wonders of Africa - close enough to touch.
