

SYNOPSIS

Lightyears Ahead - Nature as a Source of Energy

Um Lichtjahre voraus - Energiequelle Natur

Biomass, solar power, wind and water could supply us with all of the electricity and heat we need. Today some 130,000 persons are employed in Germany in the renewable energy resources sector; however, environmental groups and municipalities are still the only ones coming up with initiatives of this kind. The political will for far-reaching initiatives is lacking, and individual initiatives are no longer enough. Now, the political sphere is faced with the challenge of creating a suitable framework for engineering a complete change-over to renewable resources.

Year: 2004

Run-Time: 1 x 44 min.

Directed by Augustine Wöss
